

The deliverable tonight is a repo, not a notebook. The data is already clean: you run a plot, write one histogram, and spend the night on the workflow. **No AI tonight.**

Set up steps 1–6

- 1 **Pair up.** Partner A = weather, Partner B = demand. Solo/online? Two accounts, or pair over Teams.
- 2 **Partner A:** open the **template repo** → **Use this template** → **Create a new repository** → owner = you, name `opim5512-lab1-<netidA>-<netidB>`, **Public**.
- 3 **Partner A:** **Settings** → **Collaborators** → **Add people** → Partner B → **B accepts** the invite (email or 📧).
- 4 **Partner A:** **Settings** → **Rules** → **Rulesets** → new branch ruleset on `main`: **require a pull request + 1 approval**. (Solo: 0.)
- 5 **Both:** GitHub Desktop → **File** → **Clone repository** → pick it → **Clone**. Once.
- 6 **Each:** **Current branch** → **New branch** → `dev-weather` / `dev-demand` → **Publish branch**.

Plot & ship steps 7–12

- 7 **Each:** Colab → **File** → **Open notebook** → **GitHub** tab → paste your repo URL → open `notebooks/Lab1_A_Weather.ipynb` (A) / `Lab1_B_Demand.ipynb` (B).
- 8 **Each:** A sets `CAMPUS`. **Runtime** → **Run all**. The line plot appears — it already saved its PNG.
- 9 **Each:** in the **TODO** cell write your **histogram** (shape given above it). Run it. Fix the title and units.
- 10 **Each:** run the **download** cell → two PNGs in your Downloads folder.
- 11 **Each:** **File** → **Save** the notebook → your repo · your `dev-` branch · same `notebooks/...` path · real message. (Plain Save, not Ctrl+S.)
- 12 **Each:** Desktop → **Show in Explorer** → drag both PNGs into `images/` (rename if (1)) → top bar = your branch → **Commit** → **Push**.

Review & merge steps 13–16

- 14 **Each:** github.com → **Compare & pull request** → Create → **Reviewers** → your partner.
- 15 **Each:** open your **partner's** PR → **Files changed** → read the histogram, look at the PNGs → **Approve**.
- 16 **Merge** both PRs → **Delete branch** on each.
- 17 **Both:** Desktop → `main` → **Fetch** → **Pull**. Four PNGs and both notebooks are now on your laptop.

Report & read-out steps 17–20

- 18 **One screen:** github.com → `REPORT.md` → ✏ Edit → replace each → line with one sentence (units!). The plots already show.
- 19 **Commit to a new branch** `report` → Propose changes → PR → the *other* partner approves → **Merge**.
- 20 **If ahead:** run `Lab1_Joint_Optional.ipynb` → `temp_vs_load.png` → `images/` → fills report section 5.
- 21 **Read-out:** one plot on screen, one sentence — check **Insights** → **Network** shows the loop both ways.

Don't panic

- **Commit early** — committed work is nearly impossible to lose.
- **Fetch & Pull can't hurt you.** Fetch = peek, Pull = download.
- **Same path every save**, or you make a duplicate notebook.
- **PNG missing?** The download cell tells you which; run its cell, re-run.
- `main` rejecting your push = the protection working.

Done at 7:30 when the repo has

- Branch protection on `main`; both partners collaborators
- `images/` : **four PNGs** with the exact names
- Both notebooks saved back, a histogram in each
- `REPORT.md` : one real sentence per plot + one honest caveat
- **≥3 merged PRs**, branches deleted, both authoring and reviewing
- A network graph showing the loop both ways
